INFORMATION SHEET

Ensure the energy rating on your windows is WERS to be confident of true performance (Nat)

WERS (window energy rating scheme) is designed to look specifically at window ratings to improve the comfort of homes.

The main purpose of energy efficiency in a residential application is to reduce the amount of times the heating and cooling appliances are turned on and off.

WERS rated residential windows have star ratings and percentage improvements to help give an easy comparison of windows.

WERS is currently the only AFRC accredited system for rating windows in Australia required for compliance to the building code of Australia's glazing provisions
